lightning protection system

# Surge protection for PROFIBUS FMS, DP and PA

## White Paper

PROFIBUS requires high availability since it is used as a communication system in process-oriented applications and as a control medium between cells and objects. However, this availability requirement makes PROFIBUS highly susceptible to surges since high inductive/capacitive coupling may occur due to its large spatial dimensions.

PROFIBUS is a product designation by Siemens for communication products (hardware and software) according to the standardised PROFIBUS standard (ProcessFieldBus). Alternative designations for PROFIBUS FMS and PROFIBUS DP are the Siemens product designations SINEC L2 and SINEC L2-DP. While PROFIBUS FMS is only designed for data transmission rates up to 500 kBit/s, PROFIBUS DP is capable of transmitting data with a transmission rate up to 12 MBit/s. PROFIBUS FMS (SINEC L2) is mainly used to handle large data volumes on a process and group control level. The fast PROFIBUS DP is designed for applications in the decentralised programmable logic controller I/O.

The latest development in the PROFIBUS segment is the intrinsically safe PROFIBUS PA which can also be used in potentially explosive atmospheres in process engineering.

A two-wire bus cable is typically used as a transmission medium. The physical properties of the bus system mainly comply with the RS 485 standard.

The bus devices can be connected as follows:

- ➔ Connection via 9-pin D-Sub miniature plug (typically 3/8 pin assignment)
- ➔ Connection via screw terminals
- ➔ Connection via bus terminals

### Building with external lightning protection

If a building is equipped with an external lightning protection system, lightning equipotential bonding is required. To this end, the earth-termination system is connected to pipes, metal installations and earthed parts of the power supply and

Table 1 Lightning current and surge arresters for intrinsically safe PROFIBUS PA, PROFIBUS FMS and DP

information technology systems. In addition, all power supply and information technology cables entering and leaving the structure are connected to the earth-termination system via lightning current arresters (**Figures 1 and 2**).

In addition to lightning equipotential bonding, surge protection measures must be taken to protect electrical installations and systems.

When properly installed, lightning equipotential bonding, surge protection and external lightning protection measures reduce failure as a result of direct lightning strikes to a minimum.

### Building without external lightning protection

Here, it is advisable to protect the bus devices with surge arresters. In this case, lightning current arresters need not be installed for power supply and information technology lines (arresters 1 and 4 are not required).

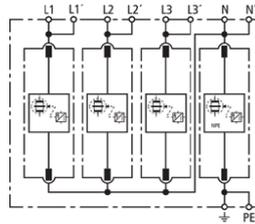

## DEHNventil

### DV M TT 255 (951 310)

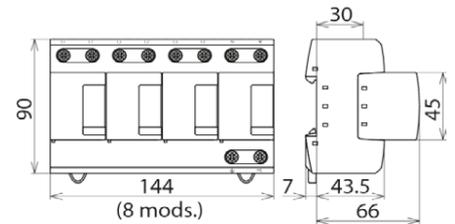

- Prewired spark-gap-based type 1 and type 2 combined lightning current and surge arrester consisting of a base part and plug-in protection modules
- Maximum system availability due to RADAX Flow follow current limitation
- Capable of protecting terminal equipment

## BLITZDUCTOR XT

### BXT ML2 BD S 24 (920 244)

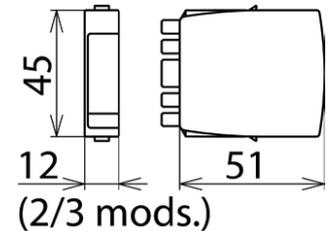

- LifeCheck SPD monitoring function
- Optimal protection of one pair and the cable shield
- For installation in conformity with the lightning protection zone concept at the boundaries from  $0_A -2$  and higher

Figure without obligation

Basic circuit diagram BXT ML2 BD S 24

Dimension drawing BXT ML2 BD S 24

Space-saving combined lightning current and surge arrester module with LifeCheck feature for protecting one pair of unearthed balanced interfaces, with direct or indirect shield earthing. If LifeCheck detects thermal or electrical overload, the arrester has to be replaced. This status is indicated contactlessly by the DEHNrecord LC / SCM / MCM reader.

## BLITZDUCTOR XT

### BXT BAS (920 300)

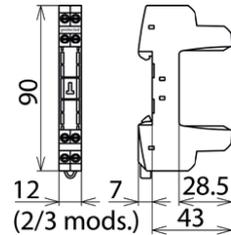

- Four-pole version for universal use with all types of BSP and BXT / BXTU protection modules
- No signal interruption if the protection module is removed
- Universal design without protection elements

Figure without obligation

Basic circuit diagram with and without plugged-in module

Dimension drawing BXT BAS

The BLITZDUCTOR XT base part is an extremely space-saving and universal four-pole feed-through terminal for the insertion of a protection module without signal disconnection if the protection module is removed. The snap-in mechanism at the supporting foot of the base part allows the protection module to be safely earthed via the DIN rail. Since no components of the protective circuit are situated in the base part, maintenance is only required for the protection modules.

## BLITZDUCTOR XT

### BXT ML4 BD EX 24 (920 381)

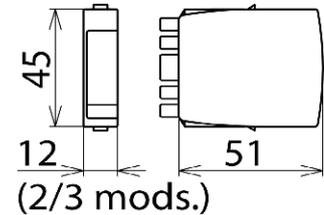

- For universal use, with LifeCheck monitoring function
- Self-capacitance and self-inductance negligibly small
- For installation in conformity with the lightning protection zone concept at the boundaries from  $0_B-2$  and higher

Figure without obligation

Basic circuit diagram BXT ML4 BD EX 24

Dimension drawing BXT ML4 BD EX 24

Space-saving LifeCheck-equipped surge arrester module for protecting two pairs in intrinsically safe measuring circuits and bus systems, meets FISCO requirements. ATEX. Insulation strength > 500 V line-earth.

If LifeCheck detects thermal or electrical overload, the arrester has to be replaced. This status is indicated contactlessly by DEHNrecord LC / SCM / MCM.

## BLITZDUCTOR XT

### BXT BAS EX (920 301)

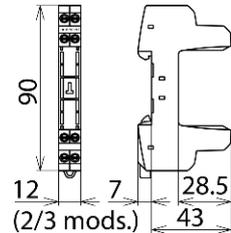

- Four-pole and universal base part for all types of intrinsically safe protection modules
- No signal interruption if the protection module is removed
- Universal design without protection elements

Figure without obligation

Basic circuit diagram with and without module

Dimension drawing BXT BAS EX

BLITZDUCTOR XT base part for use as an extremely space-saving and universal four-pole feed-through terminal for intrinsically safe circuits for the insertion of the protection module, no signal disconnection if the protection module is removed. The snap-in mechanism at the supporting foot of the base part allows the device to be safely earthed via the DIN rail. Since no components of the protective circuit are situated in the base part, only the protection modules must be maintained.

| Type<br>Part No.                              | BXT BAS EX<br>920 301   |

## DEHNpipe

### DPI MD EX 24 M 2 (929 960)

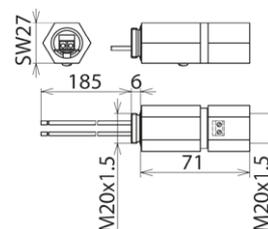

- Easy to mount due to two-part design
- Self-capacitance and self-inductance negligibly small
- For installation in conformity with the lightning protection zone concept at the boundaries from  $0_b - 2$  and higher

Figure without obligation

Basic circuit diagram DPI MD EX 24 M 2

Dimension drawing DPI MD EX 24 M 2

Energy-coordinated two-stage surge arrester with low-capacitance protective circuit for protecting intrinsically safe measuring circuits and bus systems, meets FISCO requirements. Insulation strength > 500 V to earth. Cable glands must be ordered separately.

#### Technical data

| Type   | DPI MD EX 24 M 2  |
|--|---|
| Part No.   | 929 960   |
| SPD class  | <b>TYPE 2 P1</b>  |
| Nominal voltage ( $U_N$ )  | 24 V  |
| Max. continuous operating voltage (d.c.) ( $U_C$ )                   | 34.8 V  |
| Max. continuous operating voltage (a.c.) ( $U_C$ )                   | 24.5 V  |
| Max. input voltage acc. to EN 60079-11 ( $U_i$ )                     | 30 V  |
| Max. input current acc. to EN 60079-11 ( $I_i$ )                     | 0.5 A   |
| Nominal current ( $I_n$ )  | 0.5 A   |
| D1 Lightning impulse current (10/350 $\mu$ s) per line ( $I_{imp}$ ) | 1 kA  |
| C2 Total nominal discharge current (8/20 $\mu$ s) ( $I_n$ )          | 10 kA   |
| C2 Nominal discharge current (8/20 $\mu$ s) per line ( $I_n$ )       | 5 kA  |
| Voltage protection level line-line for $I_n$ C2 ( $U_p$ )            | $\leq 55$ V   |
| Voltage protection level line-PG for $I_n$ C2 ( $U_p$ )              | $\leq 1100$ V   |
| Voltage protection level line-line at 1 kV/ $\mu$ s C3 ( $U_p$ )     | $\leq 49$ V   |
| Voltage protection level line-PG at 1 kV/ $\mu$ s C3 ( $U_p$ )       | $\leq 1000$ V   |
| Cut-off frequency line-line ( $f_c$ )                                | 7 MHz   |
| Capacitance line-line (C)  | $\leq 850$ pF   |
| Capacitance line-PG (C)  | $\leq 15$ pF  |
| Series resistance per line   | 1.8 ohms  |
| Operating temperature range ( $T_U$ )                                | -40 °C ... +80 °C   |
| Degree of protection   | IP 67   |
| For mounting on (field / device side)                                | M20 x 1.5 female thread / M20 x 1.5 male thread               |
| Connection (input / output)  | screw / connecting lines (1.5 mm <sup>2</sup> )               |
| Length of the connecting lead  | 200 mm  |
| Cross-sectional area, solid  | 0.08-2.5 mm <sup>2</sup>                                      |
| Cross-sectional area, flexible                                       | 0.08-1.5 mm <sup>2</sup>                                      |
| Earthing via   | enclosure   |
| Enclosure material   | StSt (V2A)  |
| Colour   | bare surface  |
| Test standards   | IEC 61643-21 / EN 61643-21                                    |
| Approvals  | EACEx, ATEX, IECEx, SIL                                       |
| ATEX approvals   | DEKRA 11ATEX0076 X: II 2 (1) G Ex ia [ia Ga] IIC T4 ... T6 Gb |
| IECEx approvals  | DEK 11.0025X: Ex ia [ia Ga] IIC T4 ... T6 Gb                  |
